PROFESSIONAL SUMMARY

Python-focused application developer with hands-on experience building business applications, automating workflows, integrating REST APIs, and resolving application issues using Zoho Creator and Deluge. Skilled in Python full-stack development, with projects spanning multimodal fake news analysis, expense tracking, employee feedback management, and a Diwali history website. Comfortable with Python, SQL, web technologies, API integration, version control, and deployment concepts. Brings a practical, problem-solving approach to gathering requirements, building features, testing solutions, and improving usability.

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, SQL, Java
Backend: Django, FastAPI, REST APIs, JSON **Frontend:** HTML5, CSS3, React.js, Tailwind CSS
Databases: PostgreSQL, MySQL, Relational Database Concepts
Cloud & DevOps: AWS, Docker, Jenkins, Kubernetes, CI/CD, Deployment Basics
Zoho Development: Zoho One, Zoho Creator, Zoho CRM, Zoho Books, Zoho Inventory, Deluge
Tools & Practices: Git, GitHub, VS Code, Postman, API Integration, Workflow Automation, Debugging
Soft Skills: Problem Solving, Communication, Team Collaboration, Adaptability, Attention to Detail, Analytical Thinking

PROFESSIONAL EXPERIENCE

Business Application Developer **Jul 2026 – Present**
VSInterconnect India Pvt. Ltd. *Bengaluru, Karnataka*

- Build and maintain business applications from operational requirements, translating business needs into practical workflows and features.
- Design forms, validations, reports, dashboards, and automated workflows that improve data consistency and reduce repetitive manual work.
- Connect applications to external services through REST APIs, parsing JSON responses to support data exchange and synchronization.
- Diagnose unexpected application behavior and deliver fixes that strengthen reliability and user experience.
- Apply SQL concepts to support reporting and validation, and partner with stakeholders to clarify requirements and test changes.

Junior Zoho Developer **Jan 2026 – Jun 2026**
NPK Business Solutions *Bengaluru, Karnataka*

- Developed and supported business applications tailored to user and client requirements.
- Built forms, subforms, validations, approval workflows, notifications, reports, and dashboards using Zoho Creator and Deluge.
- Integrated applications with external systems via REST APIs and webhooks, processing JSON responses.
- Resolved issues involving lookup fields, subform data, and transaction numbering, and supported scheduled automation and data synchronization.

PROJECTS

Multimodal Fake News Analysis Using Image–Text Similarity *Python | ML/NLP | BERT | ResNet18*
GitHub Repository

- Explored a multimodal approach that examines a news item's written claim together with its associated image instead of relying on text alone.
- Combined natural-language processing and image-feature analysis, using BERT for text representation and ResNet18 for image features, to compare information across two modalities.
- Targeted image–caption mismatches that may signal misleading or unrelated visual content.
- Structured the pipeline around preprocessing, feature comparison, and result interpretation so outputs are easier to evaluate.
- Framed similarity scores as support for human review rather than proof of truth or falsehood, with explainable results that show why an item needs further checking.

Personal Expense Tracker Application *Python | SQL | PostgreSQL*
GitHub Repository

- Designed a centralized system for recording income and expenses by amount, date, category, and description, making transactions easy to review.
- Planned relational data storage so transaction records stay organized and simple to retrieve, filter, and maintain.
- Added category- and period-based summaries that reveal spending patterns and support day-to-day expense management.
- Built input checks for required fields and valid amounts to keep records consistent and summaries reliable.

Employee Feedback System Application *Python | Web Development | SQL*
GitHub Repository

- Designed a structured workflow for collecting, storing, and reviewing employee feedback in a single place.
- Applied form validation and consistent fields to improve submission quality and reduce incomplete records.
- Defined clear review workflows and access boundaries to protect potentially sensitive employee comments.
- Introduced status tracking and organized feedback records so reviewers can follow up on submitted responses.
- Kept navigation simple and the submit-and-review process consistent for every user.

Personal Portfolio Website *React.js | TypeScript | Tailwind CSS*
GitHub Repository

- Developed a professional portfolio site presenting technical skills, projects, experience, and career information in a clear, accessible format.
- Built a responsive interface with React.js, TypeScript, and Tailwind CSS, ensuring clean navigation and consistent presentation across devices.
- Curated project details and professional links into a single view that gives recruiters and hiring teams quick access to technical work.
- Published the site online as a live portfolio, linked in the header.

Diwali History Website *HTML | CSS | JavaScript | Python/FastAPI*
GitHub Repository

- Built a history-focused website presenting Diwali's cultural significance through structured content and visual storytelling.
- Paired an HTML, CSS, and JavaScript front end with a Python/FastAPI backend and external API integration.
- Resolved environment configuration, API connectivity, and error-handling issues, strengthening debugging skills across a connected front end and backend.
- Explored separate front-end and backend deployment, and delivered a responsive, readable layout with a clear content flow across devices.

INTERNSHIP EXPERIENCE

AI and ML Intern **Dec 2025 – Jan 2026**
Nirmaan Organization *Bengaluru, Karnataka | On-site*

- Gained exposure to AI and machine-learning concepts through guided learning and practical activities.
- Learned the ML workflow: problem definition, data preparation, output evaluation, and result interpretation.
- Applied AI/ML techniques to classification tasks and documented findings clearly.

Java Full Stack Trainee **May 2025 – Jul 2025**
Rooman Technologies *Bengaluru, Karnataka | On-site*

- Completed full-stack training in application development and web technologies, including website and mobile apps.
- Practiced connecting user-facing pages with application logic and tracing how data moves through a web application.
- Built foundations in web design, debugging, and structured feature development.

AWS Trainee **Feb 2025 – Jun 2025**
Internship Studio *Online | Remote*

- Completed AWS-focused learning covering foundational cloud concepts, infrastructure, and core service categories.
- Learned how cloud platforms support application hosting, availability, and resource management.
- Studied deployment and scalability fundamentals, including the importance of security and reliable configuration.

EDUCATION

B.Tech – Computer Science and Engineering **2022 – 2026**
Jawaharlal Nehru Technological University Anantapur (JNTUA), Andhra Pradesh **85%**

Intermediate – MPC **2020 – 2022**
Sree Bharathi Junior College, Piler, Andhra Pradesh **60%**

SSC **2016 – 2020**
Z.P. Girls High School, Rompicherla, Andhra Pradesh **98%**

CERTIFICATIONS

AWS Cloud Practitioner Essentials – Internship Studio | Cyber Security Fundamentals – IIDT Team | Java Full Stack Development – Rooman Technologies | Frontend Web Development – IIDT Team | TCS iON Career Edge
